

IEK UNDERVOLTAGE TRIP RM-250/400 (RM-35/37)

RM undervoltage trip provokes MCCB shutting down when phase or line voltage at the input is lowered up to 70% from the rated value. It also helps to prevent MCCB actuation if the circuit voltage is less than 85% from the rated values. High speed operation and guaranteed instantaneous switch off when phase or line voltage is reduced. Compliance with current breakers: IEK_V0000043

Seal-in voltage range: $(0,7-1,1)U_e$

Nominal rated voltage: 230

Mains frequency: 50

Range of actuation voltage: $(0,85...1,1)U_e$

Power consumption in standby mode: 10

Power consumption in shutdown mode: 10

Pret: 177,24 LEI (TVA inclus)
