

IEK MECHANICAL HYGROSTAT FROM 35 TO 95% RH

Thermostats and hygrometers are meant to control fans and heaters. When installed in conjunction with a heater (NC) or fan (NO) is used to maintain a predetermined temperature and humidity inside the electrical cabinets and the organization of stable operation of the installed active equipment. They are also used to activate the alarm sensors when the temperature limit is exceeded or lowered. Thanks to its simple construction, it is easy to install and operate. Wide range of temperature and humidity adjustment with low error.

Easy to install and configure.

High switching capacity.

Significant service life.

Wide range of nomenclature. Mounting method: EV006428

Contact type: IEK_V0000794

Nominal rated voltage: 240

Type of switch function: EV000201

Material housing: EV000139

Colour: EV000270

RAL-number: 7035

Operating temperature range: -60...+60

Ambient class: IEK_V0000172

Degree of protection (IP): EV006405

Maximum switching capacity: AC: 250 V, 5A; DC: 20 V

Maximum start-up current: 16

Pret: 237,80 LEI (TVA inclus)
