

IEK TEST SCREWDRIVERS OP-2E

OP-1 and OP-2e are modern and efficient devices of new generation that can quickly and safely check the following parameters: AC and DC voltage, polarity, circuit integrity. The advantage of a screwdriver with a battery is that compared to a conventional probe, such a device can be used even to check the integrity of conductors and fuses, which makes it multifunctional. Type of test: EV000067

Voltage indication: EV000432

Voltage measurement range: 70...250/70...1000

Resistance test range: 0...100000

Mains frequency: 50...500

Indication of electro-magnetic fields more than: 5

Ambient temperature: -10...50

Current supply: EV000389

Definition of voltage circuit integrity: 1,2...36

Resistance indication: EV000428

Pret: 26,40 LEI (TVA inclus)
